IN THE CLAIMS:

The applicant has amended and added claims as follows:

- sub C1
B6
1. (Amended) A circuit arrangement for filtering and/or selecting single frequencies or frequency ranges of signals, said circuit arrangement (100) comprising at least two electric resonant circuits (10;20;30)
- with at least an inductive element (12;22;32) and
 - at least a capacitive element (14;24;34),
- characterized in that the resonant circuits (10;20;30) are magnetically fixedly coupled to each other, and in that all the resonant circuits (10;20;30) of the circuit arrangement (100) are arranged on only one metallization plate (40) of an integrated circuit, having an essentially constant ohmic resistance.

- B7 sub C1
2. (Twice Amended) A circuit arrangement as claimed in claim 1, characterized in that the individual resonant circuits (10;20;30) are essentially arranged in a planar way on an outer surface area of the integrated circuit.

- B6 sub C1
5. (Twice Amended) A circuit arrangement as claimed in claim 4, characterized in that the geometric structure is a circle, an oval, an ellipse, a square or a rectangle.

- B9 sub C1
7. (Twice Amended) A circuit arrangement as claimed in claim 1, characterized in that
